
Conference: Forum Fish Protection and Downstream Fish Migration

Event

[Conference](#)

Date

16 - 17 May 2017

Location

Dessau, Germany

The conference was in line with the thematic approach of the Forum, but took also into account the need for professional development. The conference focused on presenting and discussing current research and development projects from Germany, Austria and Switzerland on the following thematic priorities:

- Fish migration in districts
- Fish behavior at fish protection and downstream facilities
- Anthropogenic and natural mortality along migration routes and project-specific assessment approaches
- Technical measures for fish protection and downstream fish migration regarding hydroelectric power plants, pumped-storage power plants, sluices and pumping stations

On the basis of the presented research, the current and future action and research requirements regarding fish protection and downstream fish migration from an administrative, legal, political and scientific point of view was reflected.

Particular attention was paid to fish protection and fish downstream facilities according to EBEL, GLUCH and KEHL. The extensive implementation experience that Saxony-Anhalt has in this regard was presented during the conference and during the subsequent excursion.
