The Adaptive Marine Policy (AMP) Toolbox

Supporting Policy-Makers Developing Adaptive Policies in the Mediterranean and Black Sea

Publication

Article

Citation

This article describes the functionality of the Adaptive Marine Policy (AMP) toolbox, which was developed in order to operationalize the design and implementation of adaptive policies on the basis of the Ecosystem-Based Approach (EBA). It aims at providing policy makers with a practical framework to design and implement adaptive policies. The authors, among them Ecologic Institute's Benjamin Boteler and Ina Krüger, summarize the results of the application of the toolbox to the marine litter issue in the Mediterranean and Black Sea. The article is available for download.

As adaptive management is essential to the practical application of EBA, the toolbox can be used to build a science-policy interface according to EBA and provide a practical and useful starting point to support the application of the necessary steps and key activities.
