Ecologic Institute (2013): Economics of Climate Change Adaptation in Europe (ECONADAPT).
URL: <http://econadapt.eu/>

Recognizing that there is an economic rationale for climate change adaptation, the ECONADAPT project set out to advance the knowledge and evidence base on the economics of adaptation and to develop practical material to support decision making processes. ECONADAPT applied adaptation economics in several decision making scenarios that could require economic information including risk management, project appraisal, impact assessments and planning processes. Throughout the project innovative methods were co-developed and tested in a participative way with diverse stakeholders engaged in adaptation policy at multiple governance scales. Ecologic Institute designed and developed the project's website which presents the resources, case studies and the latest project news.
