Umweltbundesamt 2019: Verbesserung der GewÄsserÄkologie an der Murg in Rastatt. Video. Online: <https://youtu.be/NY2yvo0k5oM>

In the urban area of Rastatt, river bank protection of the Murg was removed in order to create near-natural hydromorphological structures. Out of town, floodplains were reactivated for flood protection. The Yellow-bellied Toad and the Crested Newt also benefit from the restoration measures.

This video explains restoration measures at the river Murg. The project manager shares his experiences in an interview. The video is part of a series of ten videos on river restoration projects in Germany, which were created for the information portal river restoration of the German Federal Environment Agency ([uba.de/renaturierung](http://uba.de/renaturierung)).
