Umweltbundesamt 2019: Steigerung der Erlebbarkeit der Ruhr im urbanen Raum. Video. Online: <https://youtu.be/0OWGGLmrzZ4>

More than 20 individual measures were implemented to ensure the continuity and restoration of the Ruhr in Arnsberg. This resulted in a near-natural river landscape in the middle of the city. The restored Ruhr is increasingly shaping the cityscape. Flood protection has also improved significantly.

This video explains restoration measures at the river Ruhr. The project manager shares his experiences in an interview. The video is part of a series of ten videos on river restoration projects in Germany, which were created for the information portal river restoration of the German Federal Environment Agency (uba.de/renaturierung).
