

Circular Economy of the Next Generation. Perspectives of Social-ecological Research and Initiatives in Berlin.

Event

Digital Event

Date

5 November 2020

Location

online

Berlin is increasingly developing as a dynamic innovation field of the circular economy – a circular, resource-saving economy. (Social) innovations are no longer generated only in the field of waste recycling, but increasingly in the design and manufacture of sustainable products or with new business models. The event provides insights into current research on the development of the circular economy and the commitment of Berlin's innovators in this field.

The speakers will show the many different aspects and actors involved in the development of a circular economy in Berlin – be it the numerous initiatives for the reuse of products (such as clothing and textiles), their own "circular" construction projects in which local building materials from old buildings are further used for new ones, or the role of public procurement in promoting the circular economy.

This event is part of the series "Research for change: social-ecological perspectives for Berlin" hosted by the transdisciplinary research association Knowledge.Change.Berlin of the Berlin-based Ecornet institutes (www.ecornet.berlin).

Funding

Berlin Senate Chancellery , Germany

Organizer

Institute for Futures Studies and Technology Assessment (IZT), Germany

Partner

Ecologic Institute, Germany
Oeko-Institut (Öko-Institut e.V.), Germany

Team

Dr. Martin Hirschnitz-Garbers
