# RADOST Abschlussbericht

## UND 5. RADOST-JAHRESBERICHT

[1]

After five years of research and project results are presented in the RADOST Final Report.

After five years of research and dialog about climate change and adaptation along the German Baltic Sea coast, the RADOST project (Regional Adaptation Strategies for the German Baltic Sea Coast)

presents its most important findings in this final report. Thanks to a joint effort between research institutions, businesses, public administrations, and civil society, adaptation strategies and measures were developed in the areas of: coastal protection, tourism and beach management, water management and agriculture, ports and maritime economy, conservation and land use, and renewable energies. The final report is available for download.

This final report provides an overview of the main activities and results from the entire project's duration from 2009 to 2014, with a particular focus on the time period from 2013 to 2014, following the previous annual reports.

The development of these adaptation strategies was based on extensive research in natural and engineering sciences, which is also presented here. Other chapters cover socio-economic analysis, exchange activities at national and international level, and the communication and dissemination of results about adaptation to climate change.

All 16 RADOST implementation projects that have been carried out in collaboration with local partners are described. These include inter alia, aquaculture in the Kiel Fjord, the use of geothermal energy in beach areas, the design of multifunctional artificial reefs, and the development of alternative crops.

While Ecologic Institute acted as the coordinator of the [RADOST](#) [2] project, the project itself was sponsored by the research program "[KLIMZUG](#) [3] - Climate Change in Regions" of the [German Federal Ministry of Education and Research](#) [4].

Regional Adaptation Strategies for the German Baltic Sea Coast (RADOST)

**Table of Contents**

Module 1: Network and Dialogue for the Development of Adaptation Strategies

- Focus topic 1: Coastal Protection
- Focus topic 2: Tourism and Beach Management
- Focus topic 3: Water Management and Agriculture
- Focus topic 4: Ports and Maritime Economy
- Focus topic 5: Conservation and Land Use
- Focus topic 6: Renewable Energies

Module 2: Natural and Engineering Sciences

- Management of Climate Data
- Sea Level, Sea State Statistics, Currents, and Sediment Transport
- River-Coast-Sea: Water quality and Climate Change
- Ecology and Biodiversity

Module 3: Socio-economic Analysis

Module 4: National and European Political Setting / National and International Exchange

Module 5: Communication and Dissemination of Results

### **Keywords**

climate change, adaptation, Baltic Sea coast
