With 14 workshops in 7 countries on 3 continents, OUR ENERGY SOLUTIONS is creating an informed global community of engaged citizens, organizations, businesses, governments, and stakeholders to develop ideas and solutions to keep our society moving forward while preserving our planet for the future.

For our energy-hungry modern society, fossil fuels are a quick and easy way to power our lives, but the evidence of the dangerous consequences fossil fuels bring to our health, security, and environment is well-documented. Drilling for natural gas using unconventional technologies such as hydraulic fracturing, or

fracking, was initially conceived by some as a positive step toward a greener, more sustainable energy future. Instead, the fracking boom has brought with it a multitude of new concerns.

At the same time, renewable energy technologies have been experiencing a profound period of innovation and development, increasing accessibility to the consumer markets and becoming a cost-competitive alternative for providers. With important environmental and health benefits, renewable energies are becoming recognized as the smarter choice for the future.

So how do we balance our near-term needs with our long-term realities?

Discover more at ourenergysolutions.org and read our brochure below.

23 March 2015

Organizer

Ecologic Institute US (EIUS), United States
FracTracker Alliance, United States
South Florida Wildlands Association (SFWA), United States

Partner

Florida Gulf Coast University (FGCU), United States
Florida Atlantic University (FAU), United States

Team

Max Grünig
Elizabeth Tedsen JD

Date

23 March 2015, 25 March 2015

Location

Florida, United States

Language

English

Project ID

8237

Keywords

fracking, oil, community impacts, public engagement, education
