# **A Review of the Possible Impact of Biomass Production from Agriculture on Water**

## **BACKGROUND PAPER FOR THE CONFERENCE "WFD MEETS CAP - LOOKING FOR A CONSISTENT APPROACH"**

Dworak, Thomas; Ulrike Eppler; Jan-Erik Petersen et. al. 2008: A Review of the Possible Impact of Biomass Production from Agriculture on Water. Background paper for the conference "WFD meets CAP - Looking for a consistent approach". Background paper for the European conference "Water Framework Directive and Agriculture" , 21-22 September 2007, Paris.

## **Language**

English

## **Author(s)**

Thomas Dworak  
Stephanie Wunder  
Cornelius Laaser

## **Author(s)**

Ulrike Eppler (HNE Eberswalde)  
Jan-Erik Petersen (EUA)

## **Funding**

- European Environment Agency (EEA)

## **Year**

2008

**Dimension**

50 pp.

**Project**

Impact of Bioenergy Production on Water Quality and Water Resources

**Project ID**

1799-03

**Table of Contents**

- Policy Summary
- Introduction and purpose
- 2 Background on policy and general agricultural and bioenergy issues
  - 2.1 EU Water policy
  - 2.2 Agricultural bioenergy production: EU policies and environmental aspects
  - 2.3 Agricultural policy: land use and environmental aspects
- 3 Background on bioenergy production, key pathways, crop characteristics and production outlook
  - 3.1 Main agricultural feedstock to produce bioenergy
    - 3.1.1 Classical crops
    - 3.1.2 Newcrops
    - 3.1.3 Perennial crops
    - 3.1.4 Grass Land cuttings
    - 3.1.5 Residues (straw)
    - 3.1.6 Animal slurry or manure
  - 3.2 Future developments of bioenergy cropping and biofuel production
- 4 Potential effects of agricultural bioenergy production on water resources
  - 4.1 Potential land use changes associated with increased bioenergy cropping
    - 4.1.1 Expansion of agricultural cultivation
    - 4.1.2 Conversion of grassland
    - 4.1.3 Potential effects of SRC plantations
  - 4.2 Choice of bioenergy pathways and crop types
    - 4.2.1 Expanding of crop rotations via biogas production
    - 4.2.2 Establishment of multiple cropping systems
  - 4.3 The effect of management practices
    - 4.3.1 The influence of management practice
    - 4.3.2 Management practices in annual crops
    - 4.3.3 Management Practices in perennial energy crops
  - 4.4 The use of animal manure and agricultural residues
    - 4.4.1 Using biogas for treatment of slurry and manure
    - 4.4.2 Use of agricultural residues
  - 4.5 The impact of conversion processes
    - 4.5.1 Use of Water
    - 4.5.2 The issue of by-products
  - 4.6 Develop standards for good agricultural practice for energy cropping
- 5 Creating win-win situations by linking WFD measures and bioenergy production
  - 5.1 Increased use of energy crops as buffer sips
  - 5.2 Creation of flood retention areas
  - 5.3 Farm advisory and training for bioenergy cropping
  - 5.4 Water supply issues
  - 5.5 Water pricing

6 Conclusions and further research needs

7 Literature

### **Keywords**

Biomass, bioenergy, biofuels, bioenergy crops, water, Europe, WFD, Water Framework Directive, CAP, Common Agricultural Policy, Nitrate, Water management, agriculture, EEA, Europe
