Offsets Quality Criteria Currently Used by Airlines

[1]

Given that airlines will need to offset their greenhouse gas emissions via a market-based mechanism recently decided by the International Civil Aviation Organisation (ICAO), this report evaluates the current carbon offsetting programs of major airlines. These are mainly voluntary, offered to airlines' customers. The structure of such programs, as well as the types of offsets offered, give an indication of airlines' existing involvement with offset projects and carbon markets ahead of that involvement becoming mandatory.
