Optimal Use of Energy and Natural Resources in Montenegro

[1]

As a candidate country, Montenegro aims at adapting itself to the level of European legislation in the energy sector. Within an EuropeAid project and a consortium with IBF International Consulting SA and EuroPartner Consulting International, Ecologic Institute is supporting the Ministry of Economy in improving the conditions for investments in sustainable energy and developing the related legal framework.

In the context of the development of the legal framework for the promotion of renewable energy and energy efficiency, Ecologic Institute provides an overview on international good practices. Moreover, Ecologic Institute is responsible for the development of a methodology for the monitoring and evaluation of local and mainly small- scale renewable energy and energy efficiency projects.
