Web-based Management Guide

[1]

The RISC-KIT Web-based Management Guide is one of the five RISC-KIT tools designed to highlight key principles recommended for the planning of local DRR measures using examples from the case studies and elsewhere to provide practical illustrations. It is intended to give guidance to coastal managers in Europe and those facing similar challenges beyond the region as well as other groups concerned with coastal management (i.e. coastal resource users, technical and scientific experts and policy makers). The guide includes prevention, mitigation, protection and preparedness measures with recommendations for their use in various socio-economic, cultural and environmental settings. The RISC-KIT Web-based Management Guide is available for download.
