# Wie der klimaneutrale Umbau des Industriestandorts Deutschland gelingen kann

[1]

A smart industrial strategy relies on the triad of significantly increasing energy efficiency, the expansion of ren

The enormously innovative German industry is in a position to develop many of the technical solutions required to achieve climate neutrality and bring them onto the market. However, this is not a fast-selling item, but also requires a long-term commitment from the public sector. In this article, Jan-Erik Thie and Benjamin Görlach of Ecologic Institute discuss how German industry can become climate neutral and why the public sector plays an important role. The article is available online.
