## Reducing Consumer Food Waste RESULTS OF THE EU RESEARCH PROJECT REFRESH

[1]

This video summarises the REFRESH project's activities and findings in the field of consumer behavior. Households account for more than half of the food waste generated in the EU. A large survey conducted by REFRESH in four European countries revealed relevant information on consumer food waste behavior that was used to draw conclusions for policy makers.

The EU research project "[Resource Efficient Food and dRink for the Entire Supply cHain](#)" [2] (REFRESH) ran from 2015-2019. The 26 project partners from across Europe and China have made considerable progress in tackling food losses and food waste along production and supply chains with an integrated approach towards a more sustainable and responsible food system.
