## Transdisziplinäre Forschung: Und in der Praxis?

7TH EPISODE OF "KNOWLEDGE FOR FUTURE - THE ENVIRONMENT PODCAST"

[1]

Science creates neutral facts. It responds - in the best case without value judgement - to questions from its field, society and politics. But not everything discovered through science is actually interesting to society as a whole. Sometimes, there is simply a lack of practical relevance.

The seventh episode of the environmental podcast "Knowledge for Future" is about transdisciplinary research. The focus is primarily on cooperation between research and private sector companies. What does this cooperation look like in practice? What advantages can be gained and what challenges need to be overcome?
