Circular economy and sustainability innovations: Discussing research results with practitioners

While circular processes offer potential for small and large companies, such processes are not (yet) established across the board. For circular processes to be applied widespread, exchange

between science and companies must be improved. As part of an national research project funding scheme on the sustainable economy, three workshops were dedicated to businesses and science actors to exchange information on sustainability innovations along value chains. This German paper summarises experiences made and lessons learned from these workshops.
