Assessing the Impact Assessment for Raising the EU's 2030 Climate Target

In this project, Climact and Ecologic Institute analysed the impact assessment for the new EU climate target proposed by the Commission in September 2020. After examining policy options and modelling results, they were compared with recent studies, in particular with Climact's modelling results for 2030. [A policy brief](#) [2] highlights key points where the Commission differs from other studies and identifies climate change potentials that deserve more attention in future analyses.
