Climate Change and Water Adaptation Issues

EEA TECHNICAL REPORT NO 2/2007

The impact of climate change on Europe's water resources is a critical issue for people's lives and the economy. Even if emissions of greenhouse gases were stabilised today, increases in temperature and the associated impacts, including water availability and flooding, will continue for many decades to come. This report, which was published by the European Environment Agency (EEA) in February 2007 and co-authored by Ecologic, shows that there is a need to adapt to climate change for water resource policy and regulation across Europe. The report assesses the strengths and weaknesses of current policies and regulations, and describes progress and activities in European countries.

It presents examples for adaptation initiatives in the water management sector from different European countries, drawing on information collected through a questionnaire survey that was carried out jointly by the EEA and Ecologic. The report has contributions from Ecologic staff, and is closely related to Ecologic's project "[Climate change and water management -](#)

[adaptation strategies for Europe](#) [2]". It also provided input to the symposium "[Time to Adapt — Climate Change and European Water Dimension](#) [3]", which took place in February 2007 and was organised by Ecologic on behalf of the German EU presidency.

The report is available for download at the [EEA web site](#) [4].

Dimension

Project	110 pp.
Project ID	Climate Change and Water Management - Adaptation Strategies for Europe
Table of Contents	1873
	Acknowledgements
	Executive summary
	1 Introduction
	1.1 Background and objectives
	1.2 Climate change and impacts on water
	1.3 Adaptation policy issues
	1.4 Summary
	2 Climate change and EU water policy
	2.1 Background
	2.2 Climate change and the Water Framework Directive
	2.3 Climate change and the basic principles and tools of the WFD
	2.4 Flooding and climate change
	2.5 Climate change, water scarcity and drought
	2.6 Summary
	3 National practices and issues
	3.1 Introduction
	3.2 Activities on relation of drought and scarcity
	3.3 Flooding
	3.4 Overview of adaptation initiatives
	3.5 Country views on Water Framework Directive issues
	3.6 Research needs
	4 Discussion and future challenges
	4.1 Overall awareness
	4.2 Frameworks
	4.3 European level aspects
	4.4 Water Framework Directive
	4.5 National practices
	4.6 Research and policy support
