Trade and Climate Change

In the framework of this project, Ecologic wrote a policy paper shedding light at the most important aspects of the relationship between trade and climate change policies. The policy paper investigates which trade-related policies should be adopted to combat climate change and reviews the compatibility of those measures with the law of the World Trade Organization (WTO). Particular attention is given to issues that are of relevance to developing countries.

Please find more information on the [policy paper](#) [1].
