

Demonstration of promising technologies to address emerging pollutants in water and waste water

# Implementation of novel rapid and quantitative bioassays for water quality monitoring

Bart van der Burg – BioDetection Systems BV, Amsterdam

This research has received funding from the European Union's Seventh Framework Programme under the grant agreement no. 308339.

Demonstration of promising technologies to address emerging pollutants in water and waste water

#### Challenge: screening of extremely complex mixtures

#### Ingredients

## **Complex mixtures**

#### How to assess hazards?

# Panel of bioassays developed in Techneau

- ER CALUX (estrogens): estradiol, ethinylestradiol
- AR CALUX (androgens): testosterone, dihydrotestosterone
- PR CALUX (progestins): levonorgestrel
- GR CALUX (glucocorticoids): cortisone, hydrocortisone
- TRβ CALUX (thryoids): T3, T4

Demonstration of promising technologies to address emerging pollutants in water and waste water

#### Effect profile water samples with CALUX<sup>®</sup> cells

Selection assays:

- Priority effects & compound groups
- •Overlapping chemical domains of assays: hot spots of activity?

Van der Linden et al. 2008, Environ. Sci. Technol. 42: 5814; Schriks et al. 2010, Environ. Sci. Technol. 44: 4766-74.

### WA 4 Implementation of bioassays

Demonstration of promising technologies to address emerging pollutants in water and waste water
